GTG-71/GTG-62 Series

Silicone mat keyboard with 71 or 62 keys
in many different designs

Description

The silicone mat keyboards of the GTG-071 series and GTG-062 series are the result of development and improvement for many years. The two series has the same external dimensions and differ in the key layout. The catalog references at the end of this page bring you to special pages, which describe the individual designs. You will also find the features on those pages.

- Different country versions are available. These keyboards are also customizable and different layouts are possible.
- The keyboard can be delivered in different configurations:
  - The silicone mat separately in German or US layout
  - The compatible printed circuit board incl. keyboard controller with an AT or PS/2 interface
  - As 19" version in a front panel with 3HE use
  - Integrated in a rough metal table-top housing
  - and as a durable drawer. The drawer can easily be installed behind a rectangular opening in any front panel.
- The GTG-71 has 71 keys on only 192x85 mm with all vital keys of a standard PC keyboard including 12 function keys, a number block and the cursor keys. The layout of the GTG-62 is comparable with the MF2 Layout without Windows keys.

Robust silicone rubber core

The robust silicon rubber core allows a lot of different applications within the industrial area.

- The front of the silicone keyboard is completely sealed, which makes it the ideal choice for the application in rough environments.
- The keys are held in place by the switching mechanism and the massive silicone body all in one.
- Small knobs on the bottom of the key help stabilize the key, when it is Pressed. This leads to a brilliant tactile feeling. The front of the silicone keyboard is completely sealed, which makes it the ideal choice for the application in rough environments.
- Customized versions in different layouts are possible.
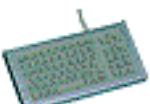

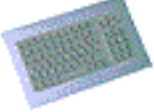

OEM module

The mat can easily be integrated in your own application, as this aspect was especially considered while developing the keyboard.

- Compact and resistant.
- This makes it easy to integrate the keyboard into any frontplate, as the cut out is a simple rectangle and not one cut-out per key as usual.
