KVS-63-Series

Exclusive vandalresistant keyboards
specialy designed for Internet terminals

Description

Applications:

This keyboard is suited for public areas prone to vandalism as well as for areas where hyiene is a must such as kiosks, points of information, industry and medical applications.
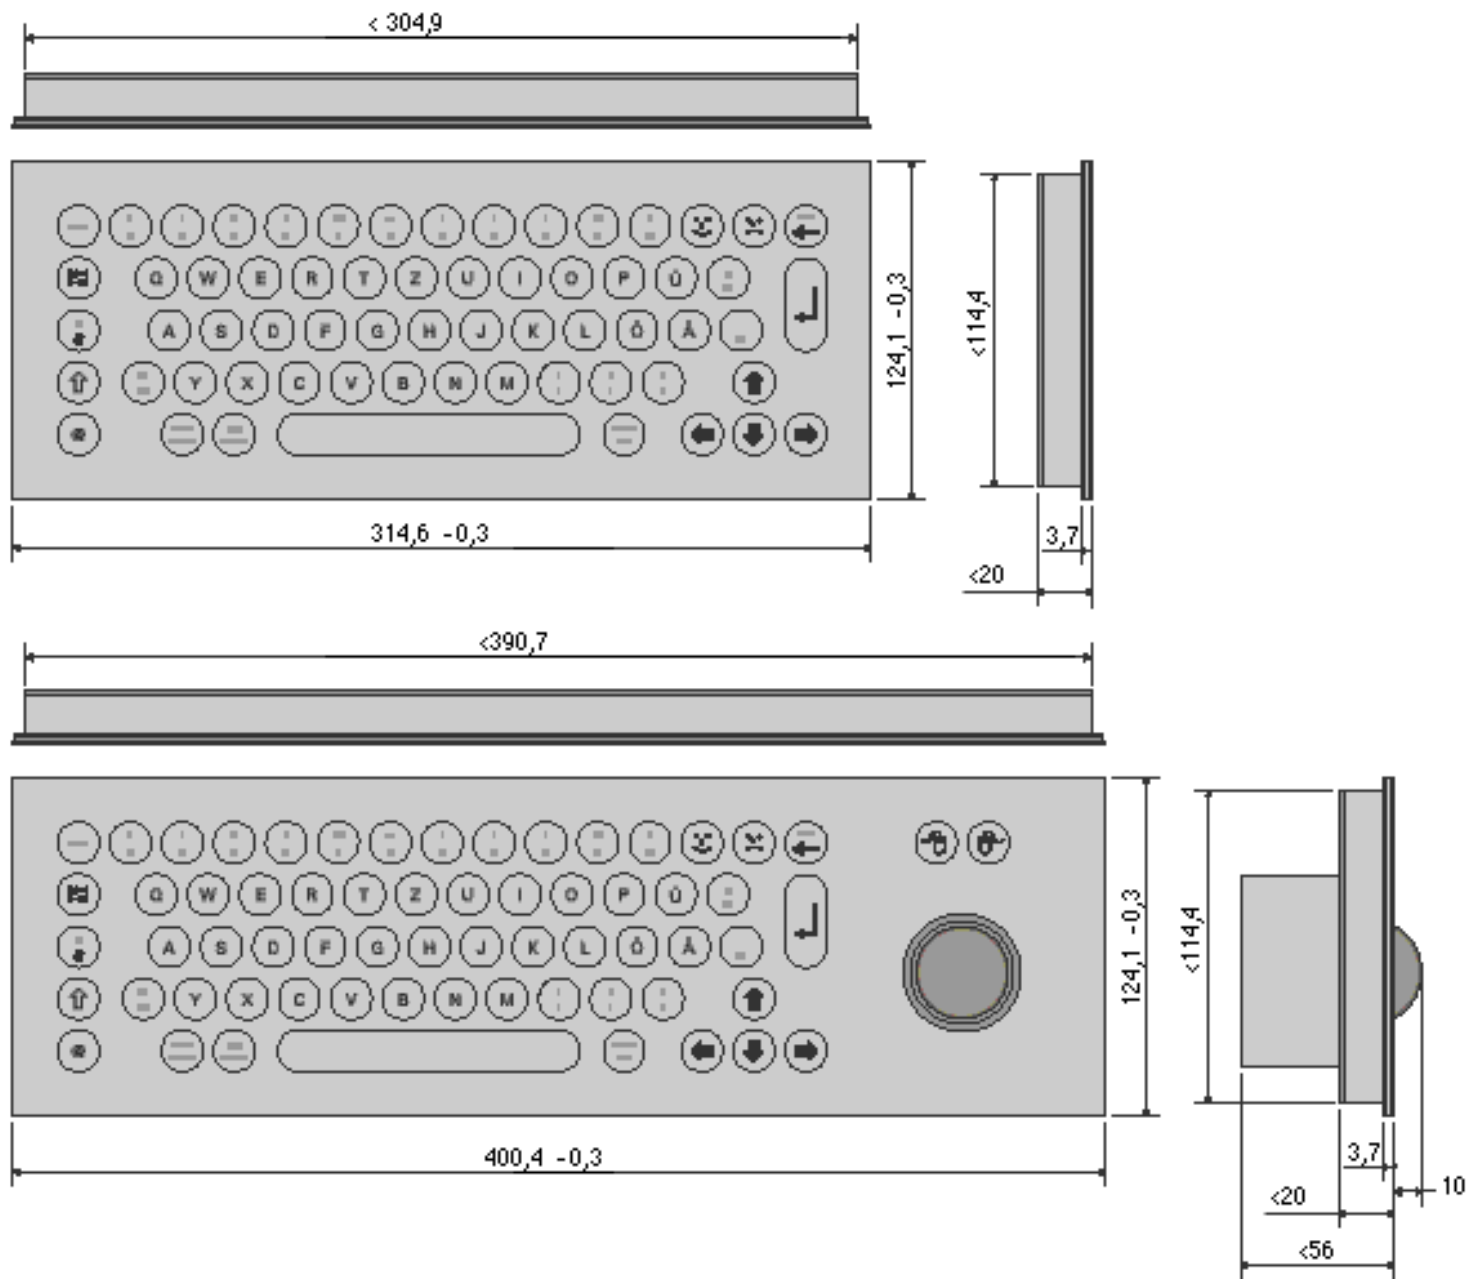

Special characteristics

The keyboard has a flat surface to avoid the prying out of the keys and to allow simple cleaning.

The short travel keys under a waterproof stainless steel front plate offer a great tactile feedback. The fact that the keyboard is waterproof makes it the perfect module to fit into existing Internet terminals in all kinds of surroundings.

In such terminals keys such as the Ctrl/Alt/Del keys should not allow the user to tamper with the system. Therefore such keys have been replaced by the following: @, smilies, www., ftp., .com, .de, ftp:// and http://

There is also a keyboard available with a 38mm Trackball. The trackball is waterproof (IP65), resistant to impact and is very durable due to its bearing mounted axis.

On demand all keyboards can be re-designed to adapt to user requirements.

Specification

Mechanical data

Dimensions:

Housing:	High-Grade Steel
Degree of Protection:	IP65
