

X-Key Switch Interface USB

Comes in a new Design.

Description

In comparison to the predecessor module the new X-Key Switch is a more lightweight and compact design.

This interface with integrated controller has 12 integrated ports for standard mono-plugs, so nearly any switch can be connected and programmed to send keyboard commands.

This makes the interface suitable for uses such as:

Industry

- Special switches and footpedals can be used to replace standard keyboards so that the workplace can become safer and more ergonomic at the same time.

Office

- Footswitches connected to the interface can be programmed to send repetitive keystrokes such as Shift, Space, Alt, Control or even shortcuts like cut/copy/paste.

Kiosk-Applications

- The keys used can be spread out, as the keys are not bound to an existing layout.

Input for Handicapped

- Switches can be connected to allow handicapped to use a computer more easily as these switches can be chosen to be chosen to suit the needs of the hanycapped person.

The [USB](#)-interface makes this interface work not only with modern PCs, but also with all Apple computers with an USB port.

Ask us for special switches and footpedals to suit your needs and that of your application.

Specification

Mechanical data

Dimensions: 115 x 80 x 32 mm
 Weight: 0,210 kg
